## SAPIENS' FAST FASHION

The fashion industry makes 100 billion items of clothing every year. 70% are made out of plastics. Clothing is responsible for 10% of global carbon emissions and 20% of global waste water.

Chile's Atacama desert receives 59,000 tons (118 million pounds) of discarded clothing from the Global North (US is the worst) every year.

Ghana's Kamanto market accepts 15 million throwaway clothing items every week.

Much of the discarded clothes in these landfills are burned.

**We just can't keep doing this.**

## ACUTE BRONCHITIS AND P

Acute bronchitis is a disease of common  
childer form may pass, in popular parlance, as  
it is really an inflammation of the mucous  
bronchial tubes. The disease is severe in prop  
end to their minute ramifications.
